PlantTech

Bringing seed technology to life

PlantTech Emerging NEWS

In the lead up to next season, PlantTech are focused on managing production and ensuring we can provide our customers with the right varieties at the right time.

Included in this November edition of Emerging News are details of our exciting canola competition that is running this season across our entire canola portfolio. We are also profiling tropical varieties Nemkat and Callide Rhodes Grass.

PLANTTECH CANOLA – Better Decision, Better Profit. WIN \$15,000 of Shell Diesel.

With the success of last years WIN A MAZDA BRAVO UTE PlantTech have again decided to offer our customers and their growers the opportunity to purchase our leading canola varieties but also go into the draw to win \$15,000 WORTH OF FREE DIESEL FROM SHELL.

This competition not only allows growers to make the superior choice in canola, but also gives them the opportunity to win free diesel, which in these times will be a great boost to any Australian farm.

An entry form will be attached to every 25 kilogram bag of Bravo TT, Warrior CL, Skipton and Rivette canola. Growers simply remove the tag, fill in their details and send the entry forms back to PlantTech. Stringent terms and conditions apply to receipt points on farms for the fuel, therefore it is recommended that all growers read the complete terms and conditions on the PlantTech website www.planttech.com.au.

To obtain a promotion card detailing the PlantTech Canola Diesel Promotion, contact PlantTech customer service toll free on 1800 112 400 or visit our website www.planttech.com.au.

PLANTTECH CANOLA - Better Decision, Better Profit

PLANTTECH TROPICAL GRASSES – Nemkat and Callide

PlantTech has available this season both Nemkat and Callide Rhodes Grass. Both these varieties are available with leading seed coating technology – **AgriStrike**. Key attributes of Nemkat and Callide include:

Nemkat Rhodes Grass

- Erect, warm season perennial grass
- Nematode resistant Katambora type
- Rapid establishment and good early vigour
- Diploid type – finer stemmed for high quality forage
- Most highly stoloniferous Rhodes grass
- Well suited to soil erosion management
- Latest flowering – excellent forage yields

Nemkat is a summer growing grass that establishes and covers the ground rapidly to form a dense sward. The variety persists well, even in low fertility and is adapted to a wide range of soil types. In comparison with other grasses, Nemkat has the ability to tolerate highly saline conditions.

Callide Rhodes Grass

- Suited to a wide range of soil types
- Late flowering and good palatability
- Ideal for grazing and / or haymaking
